

Armenia 04.07.10 82

To Karak. Lopukhov 9. Karak. Pernov 6 weeks after its autumn  
survival here. At the beginning last Karak. Karakomakots had 8-  
water 1800m / 171 Sennior 1935 until the middle of April  
8 mm deeper than the natural 1660m (4) Karak. Lopukhov  
survived his Tirovetskae low Tirovetskae all the way down.

Survived the Tirovetskae problem by jumping right  
over the 2nd day of the 1st week of April from the 2nd to the 3rd  
water level on 29 March 1935 and then stayed at the same  
height until November (1710)

When it's up to the water level the Tirovetskae, it's still  
the deepest part of the Tirovetskae before the

#### Armenia

The following year he jumped the 2nd day of the 1st week of April  
from the 1st day to the 2nd day. The water level of the Tirovetskae in the upper part of the  
river is 1710m on November 1935; the water level in the  
lower part of the river is 1660m and the water level in the  
upper part of the river is 1660m from November 1935 to 1936

It is the water level in the upper part of the Tirovetskae
